

THE AMAZING HAMPSHIRE DOME

The design plan for the Hampshire Dome was simple: Make it the biggest, tallest, most open indoor playing space in New England and make it feel like you're in a stadium in the out of doors.

THE FACTS

SIZE: The Hampshire Dome is configurable for full sized football, soccer, field hockey and lacrosse. Two baseball diamonds anchor the eastern corners with up to 368 feet distance to the power alley and 80 foot ceiling height. The Mondo Super X track surface is perfect for walkers and runners alike and at 1/5 mile is the longest indoor track in New England. The artificial turf surfaces are either rubber cushioned or filled to create a natural soft feel.

AIR VOLUME: At over 5 million cubic feet of air volume, the Hampshire Dome contains the same cubic foot air volume that would be contained in 506 standard sized elementary school classrooms.

AIR MOVEMENT: Giant dual cage turbofans propel up to 44 thousand cubic feet of fresh air PER MINUTE into the Dome. The Dome exhausts huge volumes per minute to create a wonderful air turnover rate all while circulating the upper and lower atmospheres inside the Dome, creating a light breeze throughout.

LIGHTING: Our recent "going green" investment in retrofitting our light towers with state of the art high efficiency LED lighting has resulted in daylight bright playing conditions while saving about 42 percent on our electric power consumption.

CLEAN: The Hampshire Dome is cleaned 7 days per week by our professional Janitorial contractor and by the Dome staff. Sanitizing includes constant wiping of surfaces with COVID killing disinfectant and spraying of playing surfaces with COVID killing spray. Sanitation stations are set up throughout.

FOOD SERVICES: Our food services are maintained under the strictest of sanitation standards while providing an assortment of food and drink choices.
